SINTERED STONE PAVER

Sintered Stone is a new kind of material that is made from feldspar powder together with many other minerals. Just as the name suggested, Sintered Stone goes through an engineered process of sintering, which uses high temperature and pressure to produce a solid mass that feels just like real stone. While they are commonly used for countertops and sinks, their durability and wide range of surfaces – from rough to smooth to intricate embossing – make them applicable in various interior and exterior settings.

Some of Sintered Stone's standout features include:

- **Silica-free:** Sintered Stone is completely free of crystalline silica.
- **Composition:** Sintered Stone is made entirely from minerals.
- **High-temperature sintering:** Sintered Stone is forged at high temperatures up to 2300°F, resulting in a very dense material with strong molecular bonds.
- **Low water absorption:** <0.5%
- **UV resistance**
- **Stain resistance**
- **Digital printing:** Unlike other engineered stones, Sintered Stone is able to achieve a wide range of vivid designs matching any aesthetics through automated digital printing technology that is then set at a high temperature to preserve the color depth and saturation.

TOPPAVER

SINTERED STONE
20mm

Tile usage in hardscape is becoming a new trend in exterior design and décor. Outdoor areas are where we enjoy beautiful moments with family and friends, therefore choosing the right materials to create a beautiful and safe space is extremely important. With outstanding features such as great aesthetics, high bending strength, ease of upkeep and long-lasting durability, Sintered Stone Paver is the perfect choice for not only your outdoor surfaces such as sidewalks, paths, lawns, porch and swimming pool, but also for tiling any uneven surface, raised platform and pedestal.

Welcome to the diverse world of

SINTERED STONE PAVER

TOPPAVER SINTERED STONE THE MATERIAL OF TOMORROW

TOPPAVER is the first collection in Royal's Sintered Stone range, with several remarkable qualities that promise to replace current hardscape options as the preeminent choice for your exterior needs.

In addition to the benefits of regular pavers such as high bending strength, waterproof feature and long-lasting color retention, **TOPPAVER** also incorporates Royal's signature 3-in-1 Pyramid technology, which provides an exceptional hard surface with maximum scratch resistance and slip resistance regardless of surface embossing, thus yielding an low-maintenance product that is lifeproofed without compromising the vivid designs that evokes the beauty of natural stone.

PYRAMID SURFACE TECHNOLOGY

THE PINNACLE OF INNOVATION

Pyramid surface technology is more than a breakthrough; it is a perfect combination of slip resistance and stain resistance, ushering in a new era of outdoor hardscapes. This technology prioritizes not just safety but also the aesthetics and durability of each product.

UNIQUE FEATURES OF PYRAMID TECHNOLOGY:

Optimal slip resistance: By applying cutting-edge nonslip coating technology from Spain, Pyramid ensures safety without compromising design clarity, effectively resolving this common issue for commercial matte surfaces.

Durable and Long-lasting: Our patented formula for clay, engobe, body and firing temperature produces a higher quality and longer lasting final commodity in which Royal is confident enough to put a 10-year-guarantee on.

MODERN PRODUCTION PROCESS:

1. Multilayer digital printing: By employing a multilayer digital printing method using special inks, Pyramid technology produces one-of-a-kind patterns with exceptional depths and contrast.

2. Top-coat: The design is then treated with a top-coat to produce special effects that create additional depths closely resembling nature.

3. Nonslip diamond dry glaze: A special diamond dry glaze is sprayed over top for state-of-the-art nonslip protection, yielding a slip resistance that rivals any “grip-finishes” on the market and a highly scratch-resistant surface with a hardness of 8 or above Mohs.

In conclusion, Pyramid provides TOPPAVER with not only a high-end hardscape, but also a technological masterpiece of the highest level and quality.

TOPPAVER

SINTERED STONE
20mm

Anti-slip

The structures and textures of TOPPAVER Sintered Stone reduce the risk of slipperiness.

Saving time and money

Low maintenance costs.

Mold resistant

Completely prevents mold and mildew formation, making removal a breeze.

Chemical resistant

Do not react with or take acids and chemicals, allowing for eco-friendly cleaning selections.

Fade resistant

TOPPAVER Sintered Stone is completely unaffected by sunlight, ensuring long-term usage and enjoyment.

Stain resistant

TOPPAVER Sintered Stone is nonporous thanks to the baked-on glazing process.

Scratch resistant

Thanks to Royal's signature Pyramid technology, the surface is extremely hard and virtually scratch-proof

Salt resistant

Completely unaffected by salt use.

Easy to install, replace and remove

No sealing needed, can be easily removed and repositioned to a new area when not mortared down or installed with adhesive.

Easy to clean

Mild environmentally friendly detergents and pressure washers up to 1500 PSI can be used without worry of etching or striping.

Drive over

When properly laid over concrete, TOPPAVER Sintered Stone is suitable for mild residential vehicular traffic.

Frost resistant

Can withstand frost and freezing conditions.

Thermal shock resistant

Because of its density, TOPPAVER Sintered Stone can withstand sudden, drastic temperature changes, ranging from -60°F to 140°F.

Eco-friendly

TOPPAVER Sintered Stone utilizes recycled components and adhere to the most stringent environmental regulations.

Low thermal conductivity

TOPPAVER Sintered Stones do not get hot easily, thus reduce the chance of foot burns.

Lifeproofed

Pyramid technology uses significantly smaller coating particles compared to other anti-slip treatment in the industry, which gives much less purchase for dirt to cling onto, making it hassle-free.

GENERAL PROPERTIES of SINTERED STONE PAVERS

GENERAL PROPERTIES

- **High bending strength and durability:** Sintered Stone Pavers are often designed to endure strong forces and impacts, resulting in durable surfaces with high bending and breaking strength.
- **Diverse designs:** Our Sintered Stone Pavers come in many different shapes, sizes, colors and surface embossings, allowing for the creation of diverse and creative decorative patterns.
- **Flexible installation:** Our Sintered Stone Pavers can be installed in various combinations or forms on all different types of subfloors, resulting in abundant use cases and design options that may be easily change as desired.
- **Easy to maintain and repair:** Damaged pavers can be easily replaced without having to change the entire surface.

ADVANTAGES OVER ALTERNATIVE EXTERIOR TILES

- **Drainage ability:** With a water absorption rate below 0.5%, our Sintered Stone Pavers have near perfect waterproofness that allows for more effective drainage than other hardscape products, thus saving the end users from the headache of dealing with cracking waterlogged surfaces.
- **Aesthetics and creativity:** Our Sintered Stone Pavers can be put in a variety of patterns or forms to provide aesthetic and creativity to any living space. You can make one-of-a-kind designs, photos, or beautiful patterns.
- **Anti-slip:** The surface embossing not only mimics the touch-feel of natural stones, but also create additional grip for generating friction to prevent slipping, making Sintered Stone Pavers safer to use outside, especially in rainy conditions or in wet areas.
- **Suitable for a wide range of areas and outdoor functions:** Sintered Stone Pavers can be utilized on a number of terrain surfaces, including but not limited to gardens, corridors, walkways, playgrounds, and so on.

SINTERED STONE - THE IDEAL MATERIAL FOR OUTDOOR BARBECUE AREAS

Sintered Stone is a premium material that is resistant to heat, stains, scratches and UV rays. Thanks to these features, Sintered Stone can be the ideal material for outdoor barbecue areas, preventing damages and providing a luxurious, high-end beauty.

Sintered Stone protects the floor of the barbecue oven from cracking and damage caused by high temperatures.

Discover

THE WORLD'S VERSATILITY

through TOPPAVER Collection

TOPPAVER is an optimal choice for many constructions and projects that require outdoor materials due to their outstanding qualities.

Quality and Sustainability

TOPPAVER Sintered Stone is made from the highest quality recycled ingredients and goes through a rigorous manufacturing process to ensure quality. Unlike other industries, the incorporation of recycled ceramics in our Sintered Stone makes the product stronger and more durable, with higher breaking strength and bending properties than regular tile.

Outdoor paver is a popular choice in construction projects due to their numerous applications and high durability. In particular, Sintered Stones can absorb loads and withstand harsh weather, assuring long-term stability over time, helping customers feel more secure and confident when selecting this type of product. Furthermore, they may be reused and recycled and is easy to be fixed, lowering maintenance expenses for the end user as well as supporting environmental conservation through lowering the need for replacement.

TOPPAVER is the ideal solution for customers who appreciate the high-end beauty of natural stones while also wanting to protect the surrounding environment.

Quality & Sustainability

Enhance the natural beauty of every landscape

TOPPAVER Sintered Stone has a natural stone surface that adds luxury and sophistication to every landscape. This product comes in a variety of colors and sizes, making it easy for you to choose one that suits your unique preferences and design style.

The natural beauty of Sintered Stone in **TOPPAVER** products is expressed through many elements, including:

- **Color:** **TOPPAVER** is available in a wide range of hues, from monochrome to multicolored, making it a versatile solution for all design needs.
- **Composition:** **TOPPAVER** has a strong and durable composition that can withstand harsh weathers.
- **Surface:** Unlike natural stone, **TOPPAVER** comes in many different surface textures ranging from rough to smooth without compromising its slip resistance, giving each design a unique and distinct style.

TOPPAVER

SINTERED STONE

Minimalist rustic design

- With simple but elegant designs that resemble natural stones, each product adds a sense of closeness to the environment.
- They help create a relaxing and balanced landscape that bridges the gap between nature and architecture.

Perfectly compatible with the surrounding environment

TOPPAVER Sintered Stones are made with high-quality raw materials that help to achieve realistic color and strong technical properties. This makes **TOPPAVER** perfect for adding aesthetic value while also ensuring the strictest quality standard to any decorative architectural space. Our Sintered Stones are thus the ideal choice to building spaces that feel harmonious with the surrounding environment.

Create a safe living space

TOPPAVER Sintered Stones have outstanding anti-slip features (R>11) as well as high durability indicator across the board, providing the preeminent solution to create a safe lifeproofed space for all your outdoor activities.

Novus Basalt

By adding the term "Novus" which means "new and youthful," the name "Novus Basalt" is a nod to the innovations born out of an effort to improve nature: for example, how this new generation of Sintered Stone strives to preserve the timeless beauty of natural basalt while offering superior performance for everyday use. Basalt's simple, pure appearance with unique patterns is the most eloquent proof of a product with timeless value regardless of trends — only now it comes with TOPPAVER's cutting edge surface technology and exceptional physical properties that ensures its long-lasting durability.

Given its timeless elegance, Novus Basalt is a versatile option that can be used in any area of the house, from residential apartments to public places, in both traditional and contemporary styles.

INSTALLATION GUIDE

TOPPAVER Sintered Stone can be installed on a variety of surfaces, including grass, sand, gravel, elevated floor, and so on.

Please refer to our

INSTALLATION GUIDE BOOKLET

for detailed instructions for each substrate.

All installations must adhere to the following guidelines:

- Only use a paver saw with a wet cut porcelain blade to cut TOPPAVER Sintered Stone.
- Never use a plate compactor to compact TOPPAVER Sintered Stone.
- Never install TOPPAVER Sintered Stone without spacers (minimum 4 mm - 5/32").
- Gloves are strongly advised when handling and installing TOPPAVER Sintered Stone to protect the hands from harm.
- Project/site evaluation and structural design must be performed by a qualified professional engineer.

TOPPAVER

SINTERED STONE
20mm

CUTTING GUIDE

Due to their 20mm thickness and extremely hard surfaces, cutting TOPPAVER Sintered Stone is very different from cutting regular tiles and requires specific tools as well as techniques, such as:

- Using a segmented blade for linear cut
- Making a 2-3mm deep groove for linear cut
- Using core bits to drill holes

Royal suggests the use high-quality tools, plenty of water before, during, and after the cutting/drilling phase, as well as approved wet or suction equipment. Royal always recommends wearing safety glasses, masks, gloves, and steel toe shoes.

Please refer to our
CUTTING GUIDE BOOKLET
for detailed instructions

CARE & MAINTENANCE

DO

- Keep Sintered Stone clean with basic cleaning of warm water and mild soap.

- Use multi-purpose spray cleaner to remove soap scum, hard water stains and mildew.

- Wipe Sintered Stone dry thoroughly after cleaning.

- Cover furnitures and table legs with protectors to prevent scratches.

- Choose products in compatible with grout to avoid damage.

- Read the instructions on the packaging carefully.

- Install Sintered Stone in the direction indicated by the arrow on the back of the product.

DO NOT

- Expose Sintered Stone to permanent inks or dyes.

- Use cleaning products containing acids, ammonia or other strong chemicals.

- Clean Sintered Stone with oil-based cleaners.

- Put too much pressure on Sintered Stone past acceptable range (please refer to Technical Data sheet for the breaking strength).
